Dear Christiana,

Thank you very much for your application and interest in working at TeamViewer. I'm happy to inform you about the next steps of your application.

We kindly request you to answer the following questions:

- Explain the difference between Docker and virtual machines (VMs) and when you would choose one over the other for deploying applications.
- Explain the concept of Infrastructure as Code (IaC) and its benefits.
- What is Kubernetes, and how does it facilitate container orchestration in a DevOps environment?
- What is Prometheus, and how does it contribute to monitoring and alerting in a DevOps environment?
- How would you manage images to be deployed only in a certain nodepool?
- When is the end of life for 1.25.15-gke.1115000 and its last maintenance support date?
- We have an application that required images pulled from 3 different repo online. How would you go about packaging that so it is able to be installed on a closed gap cluster.

Attached is also a file containing a take home assignment for you to solve as well.

The deadline to send us your answers is on 10.02.2025 (Monday) at 9:00 am CET.

Please send the answers to the following email address: rim.benabdennabi@teamviewer.com

Please also confirm that you received the questions and will submit them.

If you have any questions, please don't hesitate to reach out.

Kind regards,

Rim Ben Abdennabi
